LAB - 08

K - Fold : Splits data into k folds to train and test repeatedly for a reliable performance eshimate

Stratified k - Fold :
Preserves exact class ratios across fold.

Group k - Fold :
Keeps related items (like tickets groups) in same fold.

Confusion Matrix
Compares actual values against models predictions
TP, TN, FP, FN

Precision
Measures how many predicted positives were correct.

Recall (TPR):
How many actual positives were correctly caphred by model..

ROC (AUC)
Evaluates the positive vs false positive rates across classification thresholds.

Overfitting
When a model memorizes training data
(high accuracy, low validation accuracy

SMOTE — Synthetic Minority over-Sampling Technique used to fix class imbalance.
